

PSA-CT2P

PSE Conformance Test Suite

for 2-Pair 802.3at and 802.3bt PSE's

Product Overview

Optional Feature to PSA-3000 Family of PowerSync Analyzers

Key Features

- ☐ **Robust 802.3at / 802.3bt 2-Pair PSE Conformance Testing**
- ☐ **Fully Automated Port Sequencing and Statistics**
- ☐ **Greater than 95% PICS Coverage from 25 Tests Producing over 140 IEEE 802.3at/802.3bt Test Parameters per Port**
- ☐ **Fully Emulates All Type-1, 2, and 3 (Class 0, 1, 2, 3, and 4) PD's Including PoE LLDP*-Capable PD's**
- ☐ **Test Type-2 and Type-3 PSE's that Allocate Class 4 Power Using Multi-Event, LLDP*, or Both Multi-Event and LLDP**
- ☐ **Automatically Adapts to All Prevalent PSE Signaling and Power Behaviors Including 802.3+Legacy Detection Signaling Behaviors**
- ☐ **Configurable Waveform Trace Diagnostic Generation and Retention**
- ☐ **Colorful and Informative Spreadsheet Reporting** with Compliance (Pass/Fail) Notations and Parameter Statistics**
- ☐ **Run & Sequence from PSA Interactive GUI or PowerShell PSA Command Line**

Verification, Simplified.

IEEE 802.3 PSE's

2-Pair 15W PSE's

2-Pair 30W PSE's

2-Pair 802.3bt PSE's

The Industry "Norm"

**Unmatched 802.3
Specification Coverage**

**Widely Used by PSE
Silicon Manufacturers**

**Supports EA PoE Logo
Certification**

Fully Automated One-Button Testing

**Automatic Adaptation to
PSE Probing Techniques
and Hybrid-Legacy
Probing**

**Flexibly Sequence Tests
and Test Ports**

**Pop-Up Spreadsheet
Reporting with Statistics
and Limit Evaluation**

Always Up-To- Date

**Constantly Enhanced
and Improved**

**Tracking Service Support
Agreement**

Responsive Support

** LLDP Emulation & Analysis
feature license is sold separately*

*** Microsoft Excel 2007 or later
required*

Overview

Power-over-Ethernet (PoE) challenges design and test engineers to evaluate multi-channel, "intelligent" DC power sources that are activated and deactivated through signaling protocols operating over several power delivery and polarity configurations. The application and management of DC power over multiple local area network connections must be completely transparent and non-disruptive to the traditional data transmission functions of those network connections.

Higher Power, Smarter Power with 802.3at and 802.3bt

Under the IEEE 802.3 standards, power delivered on two wire pairs to a Powered Device ranges up to 25.5 watts at the PD interface. This places greater demands on PSE's to produce higher power levels and to properly allocate that power to many PD's. Issues of safety and specification compliance are accentuated by the higher power delivery capabilities of each Ethernet Port. The **802.3at** and **802.3bt** standards also specify a form of Link Layer Discovery Protocol (LLDP) for PoE whereby new generation PD's can communicate power demand and PSE's can communicate power allocations to those PD's, allowing overall power budgeting with granularity of 0.1 watt per Ethernet port.

Fully Automated Testing with Very High Test Coverage

The PSE Conformance Test Suite for 2-Pair PoE produces between 80 and 140 IEEE 802.3at/802.3bt test parameters per PSE port depending upon PSE capabilities and attributes. These parameters are measured in 25 distinct tests that may be selected and sequenced across up to 24 PSE ports at a time. The test covers **over 95% of the PSE PICS** (conformance check list items) in the IEEE 802.3at and 802.3bt specifications. The PSE Conformance Test Suite is widely used throughout the internetworking community as the industry "norm" for PSE specification compliance.

IEEE 802.3af, 802.3at, 802.3bt Cross-Compatibility

In today's world of PoE, PD's developed under three different 802.3 standards must be supported by all PSE's developed under those same standards. The 2-Pair PSE Conformance Test Suite evaluates 2-Pair PSE behaviors to assure proper interoperability with the full gamut of 802.3 compliant PD's.

Robust Diagnostics and Reporting

The 2-Pair PSE Conformance Test Suite automatically sequences to a pop-up spreadsheet report with full color notations of parameter pass/fail status per port and cross-port statistics for each parameter. This report automatically adapts test limits to the PSE type and test case that is sequenced. For diagnostic analysis, PSE Conformance Tests can optionally present graphical waveform traces obtained and analyzed during the course of a test. Each trace is individually notated with a description of the trace purpose or measurement parameter.

Certified Gen1 EA Logo Testing

Combined with the PowerSync Analyzer, the 2-Pair PSE Conformance Test Suite is qualified for Ethernet Alliance **Gen1** (802.3at) **PoE Logo Certification** testing enabling manufacturers to perform the testing required for EA PoE Logo marks in-house.

Verification, Simplified.

PSE Conformance Tests & Parameters

Parameter Color Key: All PSE's Type-2 & Type-3 PSE's Type-3 PSE's only Informational

Detection Probing and Functional Tests

det_v	Detection Pulse Waveform Parameters Captures and analyzes PSE detection probe voltages with both valid and slightly non-valid detection signatures. Open_Circuit_Voc Peak open circuit (disconnected) detection voltage Peak_Det_Vvalid Maximum Detection Step Level with Valid Signature Min_Det_Vvalid Minimum Detection Step Level with Valid Signature Det_Volt_Step_dVtest Detection Step Magnitude Detection Slew Detection step slew rate Good_Sig_Det_Pulse Number of Detection Signal transitions Backoff_Voltage Minimum Voltage during detection (ALT B) backoff Non802_Discr? Dependence upon Non-802 detection for validity. PSE's that use non-802.3 detection measurements to resolve a valid signature band will report "1". Detect Strategy Reports PSE Detection as one of five known strategies including 802.3at standard, proprietary pre-detection, etc.
det_i	Detection Current Limiting Measures maximum current sourcing capability from a PSE during detection. Init_Current_Isc Max detection current at minimum detection voltage Det_Current_Isc Max detection current during detection
det_range	Detection Passive Acceptance Range Assesses the range of acceptable PD signatures and the reliability of valid detection given random connect timing and capacitive loading. Assesses if PSE signals and powers on more than one pairset. Rgood_Max Maximum accepted detection resistance signature Rgood_Min Minimum accepted detection resistance signature Rmid_det MAX (or MIN) detection resistance given random connections Cgood_Max Maximum accepted detection capacitance signature Rbad_Cbad_Stat Power-Up status given a 35Kohm (marginally high) resistive signature with the lowest Capacitive signature rejected by the PSE. 4Pair_Pwr_? Determine if PSE signals and powers on both the Alt-A and the Alt-B pairsets
det_time	Detection Timing Measures detection backoff and detection probe timing parameters. Backoff_Time_Tdbo Detection back-off time (between failed detections) Eff_Backoff_Tdbo_eff Effective back-off time for PSE's that ignore rather than disable detection measurements Detection_Time_Tdet 802.3at detection time duration Total_Det_Time Total detection time including pre-detection measurements Backoff_Type Reports PSE Detection back-off as one of several known strategies including 802.3at standard, legacy, and 4-pair detection schemes
det_source	PSE Output Resistance during Detection Measures effective source resistance of PSE port during detection. PSE_Detect_Source Flag indicating if PSE uses current or voltage detection probe Output_Impedance_Zout Current probe output impedance during detection

Classification Signaling and Functional Tests

class_v	Classification Voltages Captures and analyzes PSE classification voltage levels, focusing on only the final classification performed prior to power-up. Class and Mark voltages are evaluated over every Class and Mark event present. <div> <div>Vclass_Max</div> <div>Class Pulse Average Voltage with 1 mA class signature</div> </div> <div> <div>Vclass_Min</div> <div>Class Pulse Average Voltage with 45 mA class signature</div> </div> <div> <div>Mark_Voltage_Vmark</div> <div>Mark Region Voltage with 4 mA mark signature load</div> </div> <div> <div>Mark_Voltage_Min</div> <div>Minimum Port Voltage measured over both MARK regions</div> </div> <div> <div>Class_Reset_V</div> <div>Class Probe Reset Voltage (if class probe present)</div> </div>
class_time	Classification Timing Captures and analyzes PSE classification signal timing, focusing on only the final classification performed prior to power-up. <div> <div>Class_0_Count</div> <div>Count of class pulses to a Class 0 PD</div> </div> <div> <div>Class_4_Count</div> <div>Count of class pulses to a Class 4 PD</div> </div> <div> <div>Class_Time_Tpdc</div> <div>Duration of class pulse given Single-Event 802.3at Classification</div> </div> <div> <div>Event1_Tcle1</div> <div>Duration of first class pulse given 802.3at Multi-Event Classification</div> </div> <div> <div>Event1_Tlce</div> <div>Duration of first (elongated) class pulse</div> </div> <div> <div>Event2_Tcle2</div> <div>Duration of second* class pulse given Multi-Event Classification</div> </div> <div> <div>Event2_Tcle3</div> <div>Duration of third class pulse given 802.3bt Multi-Event Classification</div> </div> <div> <div>Mark_Tme1</div> <div>Duration of first mark interval given Multi-Event Classification</div> </div> <div> <div>Mark_Tme2</div> <div>Duration of second mark interval (802.3bt) Multi-Event Classification</div> </div> <div> <div>Mark_Tme_Last</div> <div>Duration of final mark interval given Multi-Event Classification</div> </div> <div> <div>Mark_Tme1_LowI</div> <div>Duration of first mark interval given minimal (0.5mA) mark load from PD</div> </div> <div> <div>Class_Reset_Time</div> <div>Duration of IDLE time after class probe (if class probe present)</div> </div> <div> <div>Class_Probe_Events</div> <div>Number of class pulses in class probe (if class probe present)</div> </div>
class_err	Classification Current Limiting Evaluates any current limiting applied to classification signals by PSE as well as PSE powering behaviors following overloaded or illegal classification signatures. <div> <div>Class_lim</div> <div>Maximum Class Current before PSE starts to limit Class Current</div> </div> <div> <div>Pwr_CI_lim</div> <div>Power-Up response (as binary) following a current limited classification</div> </div> <div> <div>Pwr_CI_55</div> <div>Power-Up response (as binary) following a 55mA (invalid) classification</div> </div> <div> <div>Mark_lim</div> <div>Minimum Mark Current Supported during 2-event Mark Region - tested at 5.5 mA and 105 mA given 2-Event Classification</div> </div> <div> <div>Pwr_CI_Uneven</div> <div>Power-Up response (as binary) following up to 3 successive class signatures that changed from Event #1 to Event #2 (asymmetrical signature)</div> </div> <div> <div>Treset</div> <div>Duration of PSE IDLE state following asymmetrical class signature</div> </div>
class_ldp	LLDP Protocol and Mutual Discovery Testing Assesses PSE LLDP basic protocol fields, protocol timing, and power request processing for Type-1, 2, and 3 PD's. 802.3at TLV's utilized for all cases except PSE_Alloc_Pwr_bt_tlv_N & PD_Pwr_Adjust_bt_tlv_N. (Requires LLDP Emulation & Analysis feature license.) <div> <div>PSE_Source_Priority</div> <div>Bit Field for PSE Source, Priority, Reserved</div> </div> <div> <div>PSE_MDI_Pwr_Sup</div> <div>Bit Field from legacy TLV for Port Class, MDI Power Support, MDI Power State, Pair Selection, and Reserved</div> </div> <div> <div>PSE_LLDP_Time_1</div> <div>Time from Power-On to first PoE LLDP frame from PSE to Type-1 PD</div> </div> <div> <div>PSE_LLDP_Type_1</div> <div>PSE Type advertised by a PSE given Class 0-3 PD signature</div> </div> <div> <div>PSE_Echo_Time_1</div> <div>Time for PSE to echo back the PD Requested Power level</div> </div> <div> <div>PSE_Alloc_Pwr_1</div> <div>Allocated Power in response to 8.1 W PD Request from a Class 0-3 PD</div> </div> <div> <div>PSE_Alloc_Time_1</div> <div>Time to respond To 8.1 W PD Request with Power Allocated</div> </div> <div> <div>PD_Power_Adjust_1</div> <div>Allocated Power in response to a Change Request from 8.1W to 13W</div> </div> <div> <div>PSE_Adjust_Time_1</div> <div>Time to echo a PD 13 watt PD Change Request</div> </div> <div> <div>PSE_LLDP_Time_2</div> <div>Time from Power-On to first PoE LLDP frame from PSE to Type-2 PD</div> </div> <div> <div>PSE_LLDP_Type_2</div> <div>PSE Type advertised by PSE given Class 4 PD signature</div> </div>

Classification Signaling and Functional Tests

PSE_Echo_Time_2	Time for PSE to echo back the PD Requested Power level
PSE_Alloc_Pwr_2	Allocated Power in response to 20.3W PD Request from a Class 4 PD
PSE_Alloc_Time_2	Time to respond To 20.3 W PD Request with Power Allocated
PD_Power_Adjust_2	Allocated Power in response to Change Request from 20.3W to 25.5W
PSE_Adjust_Time_2	Time to echo a PD 25.5 watt PD Change Request
Link_Down_Shutdown_?	Indicates if power removed on Link Drop after LLDP negotiation
PSE_Alloc_Pwr_bt_tlv_1	PSE ability to allocate using 802.3bt TLV's with Class 3 PD
PD_Power_Adjust_bt_tlv_1	PSE ability to adjust power using 802.3bt TLV's with Class 3 PD
PSE_Alloc_Pwr_bt_tlv_2	PSE ability to allocate using 802.3bt TLV's with Class 4 PD
PD_Power_Adjust_bt_tlv_2	PSE ability to adjust power using 802.3bt TLV's with Class 4 PD

Power-Up Processes

pwrup_time	Power-Up Timing Parameters
	Measures power-up rise time and time delay from completion of final detection until power applied.
Power-On_Trise_c0	Rise Time from 10% to 90% of Vport to a Class 0 PD
Power-On_Tpon_c0	End of detection time until [power-up + 50 msec] time given a Class 0 PD
Power-On_Trise_c4	Rise Time from 10% to 90% of Vport to a Class 4 PD
Power-On_Tpon_c4	End of detection time until [power-up + 50 msec] time given a Class 4 PD
pwrup_inrush	PSE Current Limiting Behaviors During Power-Up
	Evaluates PSE current limiting and inrush overload tolerance parameters. Assures compliance to 802.3bt figure 145-22, Inrush current and timing limits in the POWER_UP state.
Init_Inrush	Maximum output current immediately after 1 msec of a severe inrush overload
Max_Inrush_c0	Maximum output current in time interval from 1 to 75 msec given Class 0-3 PD
Max_Inrush_c4	Maximum output current in time interval from 1 to 75 msec given Class 4 PD
Min_Inrush	Minimum output current while current limiting in time interval from 1 to 50 msec given 30V or higher port voltage
Tinrush	Duration of current limiting until PSE removes power
Inrush_45m	Port voltage after 50msec following 45 msec current limiting inrush overload
Inrush_Voltage	Average Port Voltage - PSE current limiting, PSA foldback suppression applied
Inrush_Strategy_c0	Indicator if PSE uses "legacy_powerup" exception (and consequences thereof) categorized into one of five possible outcomes given a Class 0 PD
Inrush_Strategy_c4	Indicator if PSE uses "legacy_powerup" exception and consequences thereof categorized into one of five possible outcomes given a Class 4 PD
LowV_Inrush	Inrush current measured when PSE output voltage allowed to drop to ~15V at start of inrush.

PSE Powered-On Performance and Processes

pwrn_v	Powered Port Voltage, Ripple, and Noise
	Measures PSE port DC and AC voltages in response to minimum and maximum power loads.
Vport_min	Minimum Port voltage with 95% of maximum supported current load
Vport_max	Maximum Port voltage with low power (0.5 Watt) load
Vport_ripple	Peak AC Ripple with 0.5 Watt and 95% of maximum supported current load
Vport_noise	Peak AC Noise with 0.5 Watt and 95% of maximum supported current load
Vtrans_min	Minimum Port Voltage measured during a 5msec load transient from 12mA to Pclass (max supported power) and back
Vtrans_max	Maximum Port Voltage measured during a 5msec load transient from 12mA to Pclass (max supported power) and back
pwrn_pwr cap	PSE Port Power Capacity
	Measures the maximum power delivery capability of a PSE port given various PD Classifications and LLDP power allocations. (LLDP emulations require LLDP Emulation & Analysis license.)
Pcon_c0=	Maximum output power from PSE Port given Class 0 PD
Icon_%_c0=	Maximum static output current relative to 802.3at Icon(Pclass_0)
Pcon_c1=	Maximum output power from PSE Port given Class 1 PD
Icon_%_c1=	Maximum static output current relative to 802.3at Icon(Pclass_1)
Pcon_c2=	Maximum output power from PSE Port given Class 2 PD

Icon_%_c2=	Maximum static output current relative to 802.3at Icon(Pclass_2)
Pcon_c3=	Maximum output power from PSE Port given Class 3 PD
Icon_%_c3=	Maximum static output current relative to 802.3at Icon(Pclass_3)
Pcon_c4=	Maximum output power from PSE Port given Class 4 PD
Icon_%_c4=	Maximum static output current relative to 802.3at Icon(Pclass_4)
Type-2_Enable	Verifies > 450 mA continuously available at 80 msec following 2-event power-up for 2-event, Type-2 PSE's or verifies >450 mA is not available for LLDP capable Type-2 PSE's prior to negotiation
Pclass_LLDP_22.7	Indicator of PSE ability to furnish Pclass (Icon) given 22.7W power grant
Pclass_LLDP_24.5	Indicator of PSE ability to furnish Pclass (Icon) given 24.5W power grant

pwrn_maxi

PSE Response to Maximum Overloads

The pwrn_maxi test evaluates PSE characteristics with respect to the POWER_ON state PI operating current templates in Figures 33-15 and 145-23 of the 802.3 specification.

Ilim_Peak_1	Maximum current PSE outputs in response to 1.9A load after 8 msec to a Class 0 PD
Ilim_min_1	Minimum output current up to 50 msec with 402mA load pulse and foldback suppression applied to assure > 30VDC (Type-1 PD emulation)
Tlim_1 or Tlim_min_1	Time to port shutdown in response to 400 mA overload given Type-1 PD
Tlim_max_1	Time to port shutdown in response to 850 mA overload given Type-1 PD
Vlim_1	Average port voltage coincident with Tlim_1 measurement
Ilim_Max_1	Maximum output current from 1 to 75 msec given 700mA load pulse and foldback suppression active given a Type-1 PD
Ktran_lo_1	% excursion below 50V given 250usec (fast) overload transient (402 mA) from a Class 0 PD
Ilim_Peak_2	Maximum current PSE outputs in response to 1.9A load after 8 msec to a Class 4 PD
Ilim_Min_2	Minimum output current up to 50 msec with 686mA load pulse and foldback suppression applied to assure > 30VDC given Type-2 PD emulation
Tlim_2 or Tlim_min_2	Time to port shutdown in response to 684 mA overload given Type-2 PD
Tlim_max_2	Time to port shutdown in response to 850 mA overload given Type-2 PD
Vlim_2	Average port voltage coincident with Tlim_2 measurement
Ilim_Max_2	Maximum output current from 1 to 75 msec given 860mA load pulse and foldback suppression active given a Type-1 PD
Ktran_lo_2	% excursion below 50V given 250usec (fast) overload transient (684 mA) from a Class 4 PD

pwrn_overld

PSE Response to Maximum PD Power Transients

The pwrn_overld test assesses powered PSE port behaviors with respect to lpeak, the maximum power overload allowed to a PD as defined in Equation 33-4 and 145-11 of the 802.3 standard.

%lpeak_1	Percent of required lpeak current that is supported over 50msec duration where lpeak (Eq. 33-4 in 802.3at) tested up to 125% with Class 0 PD
Vport_lpeak_1	Minimum Port Voltage at lpeak transient pulse given a Class 0 PD
Vport_5%DC_1	Minimum Port Voltage over 5 seconds with a quantity of 50 msec lpeak pulse transients separated by 1 second (5% duty cycle) given a Class 0 PD
%lpeak_2	Percent of required lpeak current that is supported over 50msec duration where lpeak (Eq. 33-4 in 802.3at) tested up to 125% with Class 4 PD
Vport_lpeak_2	Minimum Port Voltage at lpeak transient pulse given a Class 4 PD
Vport_5%DC_2	Minimum Port Voltage over 5 seconds with a quantity of 50 msec lpeak pulse transients separated by 1 second (5% duty cycle) given a Class 4 PD

pwrn_autoclass

PSE Response to Autoclass Signature & Autoclass Power Capacity

The pwrn_autoclass test applies only to 802.3bt Type-3 PSE's and while it will run with any 2-Pair PSE, is targeted to PSE's that support the 802.3bt autoclass process of measuring maximum PD power draw in the autoclass time window following power-up and adjusting Pclass accordingly.

Autoclass_shutdown	Flag indicating if PSE adjusts power capacity in response to a Type-3 autoclass signature and power measurement.
Pac_margin_C3_low	Flag indicating autoclass power support to low power (3W) Class 3 PD
Pac_margin_C3_high	Flag indicating autoclass power support to high power (9W) Class 3 PD
Pac_margin_C4_low	Flag indicating autoclass power support to low power (3W) Class 4 PD
Pac_margin_C4_high	Flag indicating autoclass power support to high power (16W) Class 4 PD
Autoclass_4W	Flag indicating that an autoclass signature of less than 4W is ignored whereupon PSE furnishes assigned class from classification.

MPS Processes for Power Removal on PD Disconnect

mps_ac_pwrtn	Power Timing and Load Current Impact on AC MPS PSE's Evaluates power removal timing and DC load tolerance on an AC MPS PSE. Power_Down_Time_Tmpdo Disconnect power-down timing from disconnect event DC_Max_Load_Imin1 Minimum DC current enabling AC MPS Disconnect Shutdown
mps_ac_vf	AC MPS Signaling Characteristics Measures AC MPS signaling characteristics during the Tmpdo interval. AC_MPS_V_open Peak-Peak AC probing voltage following PD Disconnect AC_MPS_V_open% Peak-Peak AC probing voltage expressed as a % Vport_pse AC_MPS_Frequency AC probing signal frequency following PD Disconnect Slew_Rate AC probing signal slew rate Source_Current_Isac Signal current sourced by AC MPS signal generation resource
mps_ac_voff	AC MPS Peak Voltage Characteristics Measures voltage peaks following PD disconnect and power-down events given an AC MPS PSE. Peak_AC_MPS_V_open1 Peak port voltage found after AC MPS power removal event Peak_Disconnect_Vport Peak port voltage following PD disconnect over a period of one second
mps_dc_valid	DC MPS Valid Signature Timing Characteristics Measures intermittent load tolerance thresholds of a DC MPS PSE. Test conditions and limits differ between Type-1/2 PSE's and Type-3 PSE's. Min_Valid_Time_Tmps Minimum valid signature ACTIVE time required for DC MPS validity Duty_Cycle_tol PSE power response to minimum valid load duty cycle
mps_dc_pwrtn	Power Timing and Threshold Assessment on DC MPS PSE's Evaluates power removal timing and DC load requirements on a DC MPS PSE. Test conditions and limits differ between Type-1/2 PSE's and Type-3 PSE's. Min_Valid_I_hold Minimum current required to maintain power given DC MPS PSE Time-to-Shutdown_Tmpdo Disconnect power-down timing from start of invalid signature

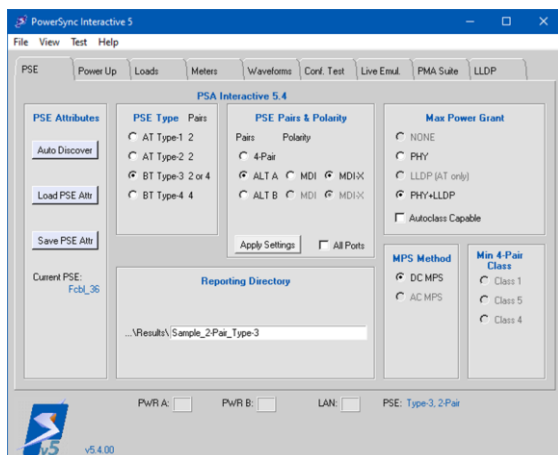

PSE Power-Down Characteristics

pwrtn_overld	PSE Response to Non-Current Limiting Overloads Evaluates PSE handling of non-current limiting overloads in the PSE discretionary region of the PI operating current templates in Figure 33-15 and 145-23 of the 802.3 specification. Icut_1 Required current to produce a Tcut (< 75msec) shutdown to a Class 0 PD Tcut_1 Time from initiation of Icut_1 load until power removal Isoft_1 Required current to produce a 2 second shutdown to a Class 0 PD if less Tsoft_1 Time from initiation of Isoft_1 load until power removal Icut_2 Required current to produce a Tcut (< 75msec) shutdown to a Class 4 PD Tcut_2 Time from initiation of Icut_2 load until power removal Isoft_2 Required current to produce a 2 second shutdown to a Class 4 PD if less Tsoft_2 Time from initiation of Isoft_2 load until power removal
pwrtn_time	PD Disconnect Shutdown Timing Evaluates PSE disconnect discharge timing as well as output characteristics during power removal. Turn-Off_Time_Toff Power discharge time with hypothetical 320KΩ load resistor Output_Cap_Cout PSE output capacitance during power discharge Output_Load_Rp PSE shunt output resistance during power discharge
pwrtn_v	Post-Overload Shutdown Voltage and Timing Measures PSE post-power-removal characteristics following an overload shutdown condition. Avg_Idle_Voff IDLE state voltage after overload shutdown Error_Delay_Ted Time from overload shutdown until a detection probe leading to a successful power-up Peak_Error_Delay_Ved Peak voltage over the Ted interval

Configuring and Running the 2-Pair PSE Conformance Test Suite

The PSE Conformance Test Suite is accessed from both PSA Interactive Software (GUI) and PowerShell PSA, an extended Tcl/Tk command line shell.

Within **PSA Interactive**, two menus are relevant to the PSE Conformance Test Suite. First the **PSE** tab menu allows users to describe, discover, or load previously stored PSE Attributes. These parameters are critical to the behavior of the PSE 2-Pair Conformance Test Suite and should be properly established for any PSE to be tested.

PSA Interactive PSE Tab Menu

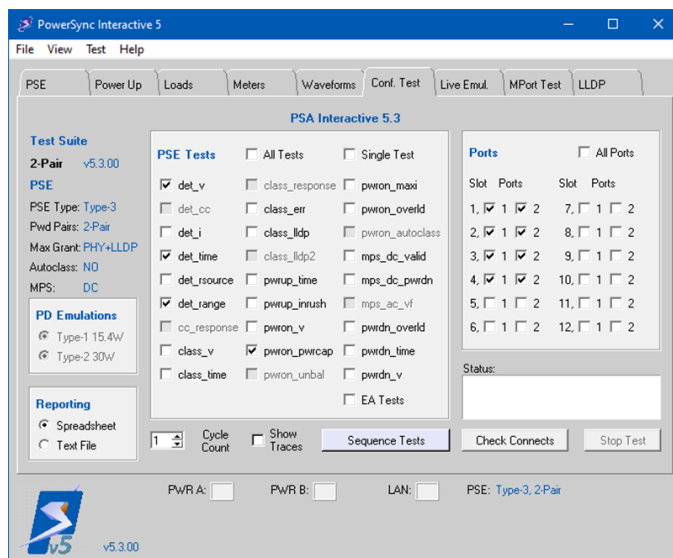

indicator displays **Type-1, 2-Pair**, **Type-2, 2-Pair**, or **Type-3, 2-Pair**.

The **Conf. Test** tab menu is then accessed to configure fully automated test sequences. This menu will automatically configure itself for **2-Pair** PSE testing when the most recently described PSE is **Type-1, 2-Pair**, **Type-2, 2-Pair**, or **Type-3, 2-Pair**. Using this menu, automated sequences of selected tests across selected test ports are readily configured and initiated. The menu also supports running just a **Single Test** on a single port.

PSE attributes including maximum power granting method (**Max Grant**) and **MPS** correspond to settings established in the **PSE** tab menu. These attributes affect which tests are available and selectable in the menu.

With the **2-Pair** PSE test suite, PSE's that support up to 15.4 watt loading (Max Power Grant = **NONE**) are tested using mostly emulated Type-1 PD's. PSE's that support up to 30 watt loading (Max Power Grant = **PHY**, **LLDP**, or **PHY+LLDP**) are tested using combinations of Type-1 PD emulations and Type-2 PD emulations and therefore produce many more test parameters.

User's may also select one of two reporting options when sequencing tests including the default option to produce a pop-up (Microsoft Excel) spreadsheet report that performs all test parameter limit checking and analysis.

PSA Interactive Conformance Test Menu

Multi-Port PSE connections can rapidly be verified prior to sequencing tests using the **Check Connects** control after selecting the desired **Ports**. Additionally, users may opt to have waveform traces produced by each test appear on screen as each test runs. Test sequences may be re-cycled up to 16 times using a **Cycle Count** control for those who need to perform exhaustive QA while getting insights into intermittent PSE behaviors.

In PowerShell PSA, PSE attributes are auto-discovered using the **psa_auto_port** command and can be recalled with the **psa pse** command. Test sequencing from PowerShell PSA is performed using the **sequence** command.

The 2-Pair PSE Conformance Test Suite Standard Report

The standard spreadsheet test report for the 2-Pair PSE Conformance Test Suite provides efficient feedback by clearly notating any specification compliance violations both by test parameter and by test (PSE) port. The report also accumulates minimum, maximum, and average parameter values across PSE ports so that users can spot individual port deviations and assess performance to design goals. Multiple cycles of testing can be specified to produce one report page per sequence cycle.

PSE 2-Pair Conformance Test Suite Standard Report

The report includes a **Notes** page with detailed explanations of each parameter of each test and an **Interop** page that rates the “Interop” risks of any particular combination of percentage of available tests are run.

The report automatically scales to the number of tested PSE ports produces multiple pages for multiple test cycles.

EA PoE Logo Certification

The Ethernet Alliance (EA) introduced an industry program in 2017 to certify PSE's and powered devices (PD's) so that interoperability and safety factors associated with PoE network equipment could be better ensured across the industry. The certification program includes a PoE Logo, or mark, that can be applied to certified equipment and to associated literature. The program also includes a web-based registry describing all certified products.

The PSA-CT2P Conformance Test Suite has been tested and approved for first party (in-house) EA logo certification testing. Contact Sifos for further information on this topic.

Ordering Information

PSA-CT2P*, 2-Pair PSE Conformance Test Suite for One PSA Address (Up to 24 Test Ports)

PSA-CT2P-TS1, Tracking Service, 2-Pair PSE Conformance Suite for One Year for One PSA Address

PSA-CT2P-TS2, Tracking Service, 2-Pair PSE Conformance Suite for Two Years for One PSA Address

PSA-CT2P-STS1, Tracking Service, 2-Pair PSE Conformance Suite for One Year for Two or More PSA Addresses
Operating at a Single Site

PSA-CT2P-STS2, Tracking Service, 2-Pair PSE Conformance Suite for Two Years for Two or More PSA
Addresses Operating at a Single Site

***NOTE:** *PSA-CT2P requires one or more **PSA-3x02** test blades or **PSA-3x02** Compact PSA and is also supported on the **PSA-3x48** RackPack PSA. Any emulation and testing of PSE LLDP behaviors further requires the **LLDP Emulation & Analysis** feature license for the PSA-3000.*

Standard spreadsheet reporting requires Microsoft Excel version 2007 or later installed on a host PC.
